STREAM DISCHARGE AND POND LEVEL DATA FOR ROCKY FLATS PLANT - KMM-021-92

Enclosed please find stream discharge and pond level data for selected Rocky Flats Plant (RFP) gaging stations and Pond C-1. EG&G Environmental Management (EM) has been directed by the U.S. Department of Energy, Rocky Flats Office (DOE, RFO) to transmit these data to the Colorado Department of Health (CDH) in your care (3045RF-92). Please note that these data are preliminary and may be subject to revision.

The enclosed information consists of:

- Diskettes containing stream discharge data for gaging stations GS01, GS02, GS03, GS04, GS05, GS06, GS07, and GS10. The data on diskette are in ASCII format and LOTUS-123 format. These data are individual flow measurements comprising the entire available discharge record for these stations.
- 2. Hardcopy of mean daily discharge and total flow for each gaging station.
- 3. Diskettes containing Pond C-1 level data and outflow data in ASCII format. These data have been compressed, and the decompression program has been included for your convenience.

EM currently is converting the record of stream stage to discharge for gaging stations GS09 and GS13. Data for gaging stations GS09 and GS13 will be transmitted to you as soon as possible. Gaging stations GS08 and GS12 currently are not operating, but these gages will be operating this summer.

I have been informed that these data will be used by CDH and USEPA personnel for surface-water modeling efforts related to Operable Unit investigations at RFP. Please contact Gregory Wetherbee at 966-8685 if you have questions regarding these data. Additional data requests should be made through DOE, RFO personnel.
